EnviroClean Process

Our EnviroClean Process sets the benchmark in washpad cleaning and degreasing! The EnviroClean process has been developed to increase safety & efficiency, reduce costs and minimise our impact on the environment.

The EnviroClean process is suitable for the majority of general equipment, heavy and light vehicle cleaning and degreasing applications on the wash pads and workshop floor cleaning.

Chemical is applied to the equipment to be cleaned via purpose built chemical dispensing systems. The dispensing system enables safe (hands off) and controlled application.

Our EnviroClean process represents a breakthrough in both technology and delivery systems in the mining, rail & transport industry.

EnviroClean is fully supported with on-site training, signage & web support.

Low maintenance air & water driven Enviroquip systems assist with ensuring the safe, controlled & effective application of the cleaners & degreasers.

Safety

- Safe & easy to use
- Wall mounted reducing trip hazards
- EnviroClean products are non-hazardous, non-dangerous & non-flammable

Efficient & Cost Effective

- Cost effective product range - no "Green Premium"
- Quick to apply - reduced labour costs
- Clear dispensing directions on chart
- Minimal training required

Environment

- Minimises wastage
- Quick-breaking, no phosphates, readily biodegradable
- Products used in the EnviroClean process are part of the Chemform Green Range
